Exercise 03: Setting the Time and Date

In this exercises you will travel back in time to the day you were born and record what celestial objects and constellations of interest where visible in the night time sky.

Instructions:

1. Press the **Home** button.
2. Select **Viewing Location** from the **Options** menu and enter the location you where born. Press the **Go to Location** button.
3. Enter your birthdate in the **Date and Time** control located on the Toolbar. To change the date or time, just click on it. The date or time will light up, and you can type in a new value.

Question: Browse around the main screen and describe what you see in the night sky. Things to record can include the Moon's phase, visible planets and constellations.

_____

_____

On your own time challenge: Find out in what constellation the Sun was in on your birthdate. Then compare the constellation the Sun was in on your birthday with your astrological sign. What do you notice? How can you explain the discrepancy?
